

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 42, line 8, with the following amended paragraph:

ABSTRACT OF THE DISCLOSURE

A hologram screen 1 ~~for displaying~~ displays an image by diffracting and scattering image light 31 projected from an image projection apparatus 2. An upward/downward light scattering device 13, ~~for scattering~~ which scatters light incident from ~~at least one~~ an upward/downward specific angle range spreading obliquely upward or ~~obliquely~~ downward, is placed on the image projection apparatus side of a hologram device 12 in the hologram screen 1, ~~and a~~ A leftward/rightward light scattering device 14, ~~for scattering~~ which scatters light incident from a leftward/rightward specific angle range spreading obliquely leftward and ~~obliquely~~ rightward, is placed between the hologram device 12 and the ~~upward/downward light scattering device 13 or~~ upward/downward light scattering device 13 ~~on the image projection apparatus side of the upward/downward light scattering device 13~~. The construction is such that the upward/downward specific angle range contains the incidence angle of the image light 31 on the hologram screen 1, and ~~the invention~~ thus provides a hologram screen ~~that has~~ having good color reproducibility and which permits viewing of the background, ~~and a hologram display using such a hologram screen.~~
